Author Index 2005

Achir, A	Non-linear control of a series direct current motor via flatness and decomposition in the bond graph domain	215
Achir, A	Bond graph and flatness-based control of a salient permanent magnet synchronous motor	461
Antory, D	Fault diagnosis in internal combustion engines using non-linear multivariate statistics	243
Ashraf, B	Smarter maintenance through internet-based condition monitoring with indirect sensing, novelty detection, and XML	283
Bartoszewicz, A	Switching plane design for the sliding mode control of systems with elastic input constraints	393
Bayseç, S	Vibration reduction of a lightly damped system using a hybrid input shaping method	335
Borges de Sousa, J	A selection of recent advances in networked multivehicle systems	1
Bouazza-Marouf, K	Active control of dynamic platforms	551
Bowling, M	STP: skills, tactics, and plays for multi-robot control in adversarial environments	33
Brown, N	CO_2 laser processing of multilayer packaging films	231
Browning, B	STP: skills, tactics, and plays for multi-robot control in adversarial environments	33
Bruce, J	STP: skills, tactics, and plays for multi-robot control in adversarial environments	33
Canan Dülger, L	A study of weaving 'Turkish knots' in handmade carpets with an electromechanical system	343
Chen, C-M	Modified bilinear integration algorithm based on the modulated sine function	609
Chen, J-H	Remote control of a moving platform and its applications	539
Cheng, C C	Processing of speech signals using a microphone array for intelligent robots	133
Chien, C-C	Visual tracking of a moving person for a home robot	259
Coy, J	Smarter maintenance through internet-based condition monitoring with indirect sensing, novelty detection, and XML	283
Dauphin-Tanguy, G	Non-linear control of a series direct current motor via flatness and decomposition in the bond graph domain	215
Dauphin-Tanguy, G	Bond graph and flatness-based control of a salient permanent magnet synchronous motor	461
Dauphin-Tanguy, G	High gain observers for non-linear systems modelled by bond graphs	477
Delgado, M	High gain observers for non-linear systems modelled by bond graphs	477
Deraemaeker, A	Active damping of chatter in machine tools – demonstration with a 'hardware-in-the-loop' simulator	359
Ding, S X	Iterative linear matrix inequality algorithms for fault detection with unknown inputs	161
Donaire, A	Non-linear control of a series direct current motor via flatness and decomposition in the bond graph domain	215
Drury, D	An improved substructuring control strategy based on the adaptive minimal control synthesis control algorithm	305
Dunnigan, M W	Application of robust chattering-reduction sliding mode control techniques for position control of a vector-controlled induction machine with non-linear friction dynamics	577
Durrant-Whyte, H	Autonomous land vehicles	77
Ebrahimi, M	Optimum multivariable wind tunnel system control	519
Enge, O	Lyapunov-stable control of mechatronic systems	173
Fujimori, A	Navigation of mobile robots with collision avoidance for moving obstacles	99
Ganguli, A	Active damping of chatter in machine tools – demonstration with a 'hardware-in-the-loop' simulator	359
Garrido, R	Control of a servomechanism using non-linear damping	295
Gawthrop, P J	Virtual actuators with virtual sensors	371
Girard, A R	A selection of recent advances in networked multivehicle systems	1
Goh, K B	Application of robust chattering-reduction sliding mode control techniques for position control of a vector-controlled induction machine with non-linear friction dynamics	577
Good, M C	Improving contour accuracy of machine tools using an integral-gain scheduler	511
Harrison, A J L	A minimal controller synthesis algorithm for narrow-band applications	591
Haseebuddin, M	U-model-based internal model control for non-linear dynamic plants	449
Hedrick, J K	A selection of recent advances in networked multivehicle systems	1
Hillis, A J	A minimal controller synthesis algorithm for narrow-band applications	591
Horodinca, M	Active damping of chatter in machine tools – demonstration with a 'hardware-in-the-loop' simulator	359
Hsu, S-F	Development of multipurpose virtual-reality dynamic simulator with a force-reflection joystick	187
Hu, J	Processing of speech signals using a microphone array for intelligent robots	133

© IMechE 2005

Hu, Z	New analytical design of the Smith predictor controller for high-order systems	271
Huang, T-Y	Development of multipurpose virtual-reality dynamic simulator with a force-reflection joystick	187
Irwin, G	Fault diagnosis in internal combustion engines using non-linear multivariate statistics	243
Jackson, M R	CO_2 laser processing of multilayer packaging films	231
Jackson, M R	Smarter maintenance through internet-based condition monitoring with indirect sensing, novelty detection, and XML	283
Jeyaraman, S	Kripke modelling of multiple robots with decentralized cooperation specified with temporal logic	15
Junco, S	Non-linear control of a series direct current motor via flatness and decomposition in the bond graph domain	215
Kaplan Jr, M	Vibration reduction of a lightly damped system using a hybrid input shaping method	335
Kapucu, S	Vibration reduction of a lightly damped system using a hybrid input shaping method	335
Kerr, D	CO_2 laser processing of multilayer packaging films	231
Kirecci, A	A study of weaving 'Turkish knots' in handmade carpets with an electromechanical system	343
Ko, R C	Improving contour accuracy of machine tools using an integral-gain scheduler	511
Kookos, I K	On the feasibility of constrained linear control problems with application to the ALSTOM gasifier	207
Kruger, U	Fault diagnosis in internal combustion engines using non-linear multivariate statistics	243
Kung, C-C	Robust position control of a perturbed electrical servo drive system via the adaptive fuzzy sliding-mode technique	145
Lam, J	Iterative linear matrix inequality algorithms for fault detection with unknown inputs	161
Lee, J	Remote control of a moving platform and its applications	539
Lin, C-T	Development of multipurpose virtual-reality dynamic simulator with a force-reflection joystick	187
Ling, K V	Stabilizing synchronization control of rotor–magnetic bearing systems	499
Liu, D K	Digital robust preview control of path tracking	111
Liu, F	Digital robust preview control of path tracking	111
Liu, F-H	Modified bilinear integration algorithm based on the modulated sine function	609
Liu, T	New analytical design of the Smith predictor controller for high-order systems	271
Liu, W H	Processing of speech signals using a microphone array for intelligent robots	133
Maißer, P	Lyapunov-stable control of mechatronic systems	173
Margolis, D	Fixed causality slip–stick friction models for use in simulation of non-linear systems	199
McCullough, G	Fault diagnosis in internal combustion engines using non-linear multivariate statistics	243
Mnif, F	Recursive backstepping stabilization of a wheeled mobile robot	419
Neild, S A	An improved substructuring control strategy based on the adaptive minimal control synthesis control algorithm	305
Neild, S A	A minimal controller synthesis algorithm for narrow-band applications	591
Notini, L	Smarter maintenance through internet-based condition monitoring with indirect sensing, novelty detection, and XML	283
Nowacka, A	Switching plane design for the sliding mode control of systems with elastic input constraints	393
Othman, F	Modelling and simulation of a system of mobile service units for the large-scale event industry	349
Parkin, R M	CO_2 laser processing of multilayer packaging films	231
Parkin, R M	Smarter maintenance through internet-based condition monitoring with indirect sensing, novelty detection, and XML	283
Parkin, R M	Modelling and simulation of a system of mobile service units for the large-scale event industry	349
Pichardo-Almarza, C	High gain observers for non-linear systems modelled by bond graphs	477
Poerwanto, H	Adaptive inverse-dynamic and neuro-inverse-dynamic active vibration control of a single-link flexible manipulator	431
Preumont, A	Active damping of chatter in machine tools – demonstration with a 'hardware-in-the-loop' simulator	359
Rahmani, A	High gain observers for non-linear systems modelled by bond graphs	477
Rieger, K	Active control of dynamic platforms	551
Schweitzer, G	Safety and reliabiity aspects for active magnetic bearing applications – a survey	383
Shafiq, M	U-model-based internal model control for non-linear dynamic plants	449
Shaheed, M H	Adaptive inverse-dynamic and neuro-inverse-dynamic active vibration control of a single-link flexible manipulator	431
Shi, F	CO_2 laser processing of multilayer packaging films	231
Song, K-T	Visual tracking of a moving person for a home robot	259
Soria, A	Control of a servomechanism using non-linear damping	295
Stoten, D P	An improved substructuring control strategy based on the adaptive minimal control synthesis control algorithm	305
Stoten, D P	A minimal controller synthesis algorithm for narrow-band applications	591
Su, C-Y	Modelling and control of a hydraulically actuated two-degree-of-freedom inertial platform	405
Su, K-H	Robust position control of a perturbed electrical servo drive system via the adaptive fuzzy sliding-mode technique	145
